FKA: Ion America Corporation, Bloom Energy develops solid oxide fuel cell technology, an on-site primary (base load) power generation system called a Bloom Energy Server. Bloom Energy is focused on providing a more reliable, cleaner and cost-effective alternative to the traditional electric power grid. The company generates low-polluting fuel cells that could put a power plant in the basement of office buildings or behind homes. By generating power on-site, where it is consumed, Bloom Energy's technology reduces operating costs and produces dramatically lower greenhouse gas emissions.
