BrightSource Energy develops utility-scale solar power plants, using high-temperature solar thermal technology that concentrates sunlight and converts the resulting heat into electricity, thus, enabling industrial and utility companies to lessen their dependency on fossil fuels by providing a source of renewable energy during periods of peak usage. BrightSource builds next-generation solar field design, optimization software and a control system that enable the creation of high pressure, high temperature steam that can be integrated with conventional power plant components. BrightSource is focused on minimizing impact to the environment and helping customers meet their clean energy goals.
