Proteus Digital Health is creating a new category of therapy: Digital Medicines, a healthcare offering that measures medication effectiveness and helps physicians improve treatment outcomes. Digital Medicine **therapy includes drugs that communicate when they've been taken, wearable sensors that capture** physiologic response, applications that support patient self-care and physician decision making, and data analytics that serve the needs of doctors and health systems. The goal of Digital Medicines is to enable physicians and health systems to more effectively manage risk and ensure that outcomes are reliably achieved.
