Human Longevity operates as a genomics and cell therapy company focused on extending the healthy, **high performance human lifespan**. HLI's mission is to identify the therapeutically targetable mechanisms responsible for age-related human biological decline and to apply this intelligence to develop innovative solutions to interrupt or block those processes, meaningfully extending the human lifespan. The company is building the largest human genotype and phenotype database in the world to tackle some of the most prevalent and actionable diseases. HLI is concentrating on cancer, diabetes and obesity, heart and liver diseases, and dementia.
